NEW CLAUSE RE: SB 854

Senate Bill 854 (<http://www.dir.ca.gov/Public-Works/PublicWorks.html>)

Senate Bill 854 signed into law on June 20, 2014, became effective immediately. It established a new public works contractor registration program which will collect fees to fund compliance monitoring and enforcement, determine prevailing wage and public works coverage, and hear enforcement appeals.

All contractors and subcontractors intending to bid or perform work on public works projects will be required to register, and annually renew, online for the program. The annual cost to register for the program is currently \$300.00 and is non-refundable. This is a Department of Industrial Relations (DIR) fee paid to the State of California. The City of Victorville will not register a contractor/subcontractor, nor collect funds for registration.

Contractors or subcontractors submitting bids must be registered by March 1, 2015. The requirement to use only registered contractors and subcontractors on public works projects, greater than \$1,000.00 applies to all projects awarded on or after April 1, 2015. No bid can be accepted nor any contract or subcontract entered into nor purchase order issued without proof that the contractor or subcontractor is registered.

If you intend to bid or provide services on City projects in the future, please ensure you are registered with the DIR prior to March 1, 2015. Effective immediately, the City will be required to fill out a form alerting the DIR of the services you are providing the City. Detailed information is required to complete this form. You may be asked to provide information needed to complete the DIR form. You will be asked to complete this in a timely manner to avoid interruption in the services you are providing.

Are you currently registered with the DIR?

FF827 SPECIFICATION

The FuelForce 827 Series Site Control Processors will manage and control dispensers with outdoor payment terminals, CRInD's (Card Reader in Dispenser, a Gilbarco Trademark), to interact with refueling site users automatically without supervision of a site attendant. These controllers function remotely, utilizing dispenser features to interact with customers. This product supports automated fuel control using the following key elements:

CRInD INTERFACE - The FF827 will communicate with the Card Reader In Dispenser (CRInD) via the Gilbarco Two-Wire interface. This works with Gilbarco Legacy, Advantage, Encore 300, Encore 500, and Encore 500S series dispensers where they have been outfitted with CRInD features. The 827 performs the following tasks:

1) Support Gilbarco Monochrome/2-Line or InfoScreen displays, such that user messaging is transmitted to the CRInD unit mounted in the dispenser through the Two-Wire remote interface. This interface is capable of supporting both monochrome text format and Gilbarco imaged text display formats.

2) Interpret card swipe events with any ISO/ABA compliant magnetic stripe card through the CRInD card reader.

3) Prompt for and receive user data from the Gilbarco incorporated keypad. Prompted responses from users may include driver, vehicle, Level III credit card ID's and security codes, vehicle meter readings (such as odometer or hours), and CNG industry Training Identification Numbers (TIN). These prompts may be authenticated or simply collected for record-keeping purposes. For any vehicle or driver code, or meter reading, which is authenticated the 827 will send messages to the user to advise when an incorrect or unacceptable data item was entered by the user before ending the authorization process.

4) Support CRInD receipt printer functions for NIST/NTEP approved receipt production in industry standard format. Receipts include a multi-line header, receipt detail, and footer. They can be configured to indicate the merchant name, address, product code, quantity, unit of measure, extended amounts, sale totals, and date/time of the transaction.

5) The CRInD Two-Wire interface connects directly to a Gilbarco UDC Distribution box, such that no additional equipment or PAM/Pump Access Module is required to support this interface.

6) Displays two-line scrolling away-mode message to greet user/customers upon initial contact with the dispenser.

7) Supports in-dispenser video display upgrade/options for Encore-S and Advantage InfoScreen dispensers.

GILBARCO ELECTRONIC DISPENSER CONTROL - FF827 will communication to the Gilbarco proprietary electronic dispenser through the Dispenser Two-Wire interface protocol to perform the following tasks:

BroadLux, Inc.

Tel: 888.332.4390 / 949.707.5600 • Fax: 949.855.7986

Post Office Box 7303 • Laguna Niguel • California • 92607

- 1) Perform remote unit price updates to the dispenser.
- 2) Authorize transactions and enforce quantity limits uniquely for each card or vehicle fueled.
- 3) Collect dispenser totalizer readings automatically with no user intervention on a regular, scheduled basis. This process will be configurable to occur upon user-scheduled time intervals. This data will enable effective auditing and fuel asset security procedures in the host Control Processor.
- 4) Supports both single-product and multiple product dispensers.
- 5) Controls up to four dispensers, each having two sides, a total of 8 fueling positions per 827 unit.
- 6) Record transactions quantities to a level of accuracy up to one-thousandth of a unit.
- 7) Hook switch/in-use signal timeout feature - for any authorized transaction, which is not followed by lifting of the hook switch handle by the user/customer, the 827 will cause the transaction to end, as a timeout feature to prevent theft or misuse. This timeout feature is configurable by the FuelForce administrator from 10 seconds to three minutes.
- 8) The Dispenser Two-Wire interface connects directly to a Gilbarco UDC Distribution box, such that no additional equipment or PAM/Pump Access Module is required to support this interface.

SITE CONTROL PROCESSOR (SCP) - The SCP will manage the interfacing of CRInD and Dispenser functions to control fueling activities at an unattended site while enforcing management guidelines and monitoring activities at the fuel site. The SCP will perform the following tasks:

- 1) Communicate with the HCP (Host Control Processor) over POTS telephone line to receive management rule updates and transmit activity records to the administrative HCP.
- 2) Enable authorization of in-house or fleet transactions, using vehicle, driver, and meter reading guidelines in native fleet formats.
- 3) Support retail credit card transactions for the following cards types via the ADS/Heartland Chicago Platform:
 - A) Voyager (including meters and Level-II ID's);
 - B) Wright Express (including meters and Level-II ID's)
 - C) FuelMan (including meters and Level-II ID's)
 - D) Visa
 - E) Visa Fleet (including meters and Level-II ID's)
 - F) MasterCard
 - G) MasterCard Fleet (including meters and Level-II ID's)
 - H) American Express
 - I) Discover
- 4) Supports Private Label Network for cardlock access.
- 5) Supports split dialing to ADS/Heartland Network and The Octane Card Network.
- 6) SCP is network certified and meets all current 2010 PCI compliance requirements and specifications under the ADS/Hartland Chicago Platform.
- 8) Supports Partial and Dollar Preauthorization procedures for securing lower Merchant Interchange rates.
- 9) The SCP is an autonomous distributed database controller. It supports fleet and in-house transaction activity without communicating to a Host and stores extensive activity records between polling events. The SCP functions independently of a Host.
- 10) The SCP follows industry standard guidelines for retail, petroleum, unattended, pay-at-pump fueling. The transactions lifecycle process includes preauthorization, completion, and batch closing events, which have been structured to assure all transactions,

are uniquely acknowledged by the Network, conforming to network limits, and adhering to banking handoff guidelines for settlement.

HOST CONTROL PROCESSOR (HCP) - The HCP is a database management application, which communicates with the SCP over analog POTS (Plain Old Telephone Service) telephone line to enable administrative control of fueling guidelines and monitoring of transaction activity with the dispensers.

1) Maintains and populates a distributed database at the SCP for autonomous operation of the fuel island.

2) Provides multiple data and transactional presentations along with other activities through the application GUI and reporting tools to the user in many flexible, configurable formats. These include report outputs in PDF/printer, Excel, CSV, Tab-delimited, and ASCII readable text formats.

3) Provides Scheduled and on demand polling of SCP(s) for transmitting new and updated configurations and settings and retrieval of transactions.

4) Supports Single PC and Work Group Server access for multiple users administering, maintaining the system

Utilize a magnetic stripe card to authorize and control the dispensing of fuel products to fleet vehicles while collecting accurate, valuable fuel usage and vehicle data for fleet management. FuelForce® is unmatched in ease-of-use by both vehicle operators and management personnel. FuelForce® can be implemented in stages, adding sites to gradually replace or supplement your old system.

Anything less, will cost you more.

FUELFORCE® System Features and Benefits

Authorization – You determine the authorization criteria that fits your facility (based on card, vehicle, driver, fuel type, and odometer checking). FuelForce® can read and authorize transactions with most major fleet and credit cards. Each FuelForce® fuel controller can discriminate between your fleet's on-site fuel transactions and authorized "guest" card usage, which is automatically routed as a "retail fuel transaction." Some competitors require two input terminals to accomplish the functionality of one FuelForce® fuel controller.

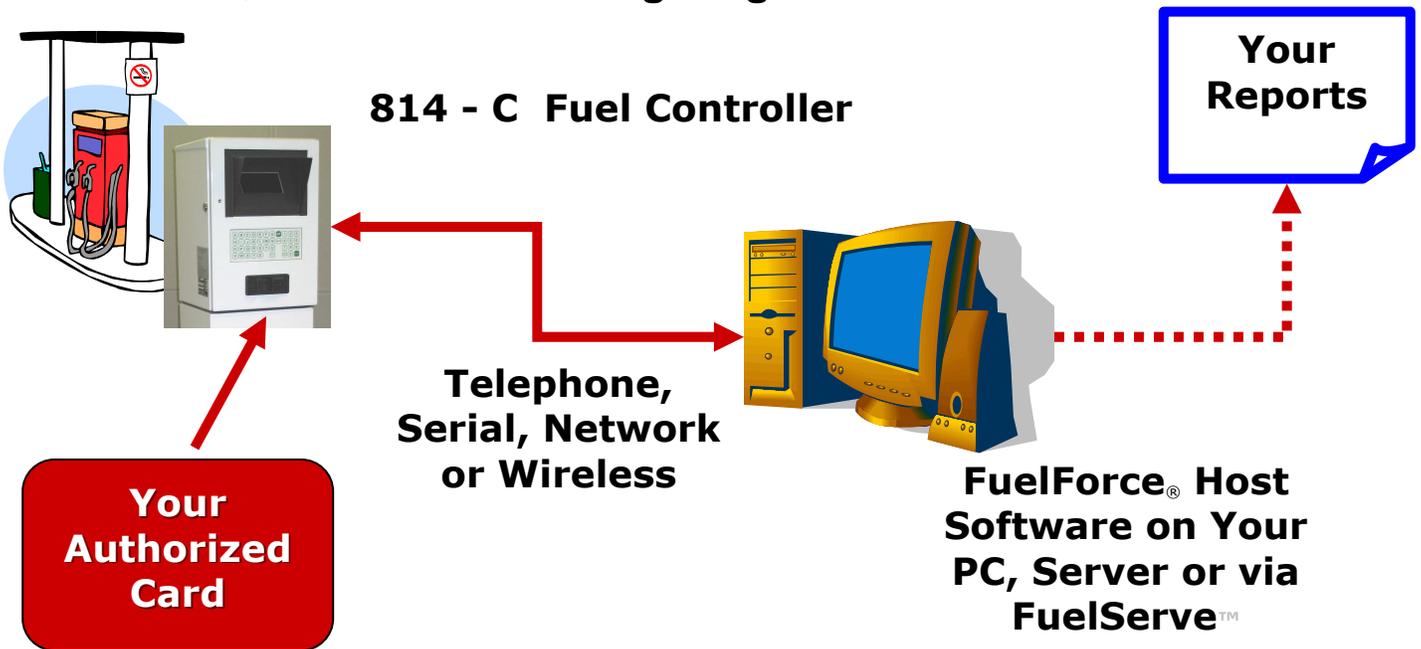

Integration - By importing your retail fueling transactions, you can run reports that are integrated with your on-site fueling data. FuelForce® also allows for data integration with your Fleet Management, HR, Accounting, Facilities Management, and Security systems. Data is shared through a flexible import / export function with common file formats and ODBC interface connections.

Billing – The FuelForce® system provides reports or files showing where all fuel transactions occurred and where you want them billed. All your on-site bulk fueling transactions are charged to appropriate accounts, departments or agencies at prices determined by you at the time of billing. FuelForce® can also interface with retail networks to process credit card and fleet card transactions.

Fuel Management – FuelForce® provides color coded tank inventory that highlights fuel and reorder levels. Tight federal and state regulations are met through the integration of FuelForce® with various tank-monitoring systems. FuelForce® software can automatically page or text email service technicians based upon tank monitoring or fuel controller alarms. With tank reconciliation capability for every tank in your system, you gain the reports that allow you to order fuel in a timely manner.

Security – You control all aspects of security including access to the fueling sites, access to the island terminal, access to sensitive data, and authorization for issuing fuel. FuelForce's® physical design and flexible user / account based protection will meet your security needs.
